STEM RACING ENTERPRISE PORTFOLIO

Team Values:

Leadership

Innovation

Creativity

Problem-Solving/Engineering

Communication/Business

Organization

Optimization/Accuracy

Ahaan (PROJECT MANAGER)

Ahaan has a strong passion for STEM racing. As team leader, he organizes roles, tasks, supports us and at the end helps us come out in victory. He handles the business elements, asking companies for sponsorships. He is the core of our team and his incredible marketing strategies takes our journey past the finish line.

Vishak (GRAPHICS MANAGER)

Vishak, our graphic designer, uses his pinpoint PowerPoint skills and outstanding knowledge of colour theory to manage portfolios, websites and is also the head of management for the Pit Display. He collaborates with his colleagues to determine the colour schemes of the team's branding.

Ayaan (DESIGN/ R&D MANAGER)

Ayaan is the head of engineering (design). He handles every aspect of the car from initial first sketches to deep analysis through CFD. He transforms 2D to 3D physical objects. He also helps with writing the portfolio and presents evolutions of our prototypes.

Ayush (TECHNICAL REGULATOR)

Ayush, our technical regulator, ensures are car designs are completely legal while he manages financial collaborations with potential sponsorships. He uses his knowledge of calculations to work out the costs.

Nathan (IT MANAGER)

Nathan is our IT manager, as he organizes files, images and sorts out social media. He has a key role of getting word of our team across. He also collaborates with Vishak & Ayaan, working on the portfolios.

Tharun (FINANCE MANAGER)

As head of finance, Tharun manages all financial partnerships, looks for potential deals with companies across, to provide our team. He also helps with portfolios and technical regulation.

RACI:

RACI is a roles and responsibilities management technique within small teams, allowing members to understand the requirements of their role. Each person is given a label for each project category : R stands for responsible; A stands for accountable; C stands for consulted and I stands for informed

	Ahaan	Ayaan	Nathan	Ayush	Vishak	Tharun

Team Name and motto:

Our team name, Bolt, represents speed and energy– like lightning, which races through the air at 200,000 miles per hour. It embodies our drive to move fast and push forward, no matter the challenge. It reflects our vibrant passion and teamwork. It ties perfectly to our motto: *Full Throttle*, motivating us to move forwards no matter the circumstance. Bolt is a very marketable name due to its simplicity – it creates an impression on the viewer, sending a clear message in terms of identity.

Original, we had a decent logo, as shown. However, it was flawed on multiple aspects:

Switching to development class, we wanted to create a more professional kind of logo – simple and recognisable. We elaborated on the yellow bolt and removed the text. Now we have a single lightning bolt in our logo.

Undefined Colour scheme- red and green?

Uninteresting to look at

#FED702

#000000

Internal Communication Methods:

Bolt App

Branded – the design is customisable, in our colour scheme, with the potential to include custom elements other apps lack
Everything in the same place – we can access the chat, simulation results, to-do list and chatbot, all from one universal place. This allows an integration between software unavailable otherwise.

Whatsapp

Community - all fractions of the team can be organised, with different chats for different purposes in the same place
Advanced features – diversity of options, ability to send locations, GIFs and refer to a build-in chatbot

Teams

Simple way to communicate within our team
Easy to access on all devices, so we can keep in touch in any situation
Files can easily be shared and edited due to sync with OneDrive

Discord

Easy to message each other – accessible on a range of devices
Advanced features – diversity of options, ability to send locations, GIFs and refer to a build-in chatbot. It also contains aid in talking to other teams from different schools & regions, with the STEM racing discord server.

Maintenance – we have to maintain over the servers and databases ourselves, potentially wasting time
Lack of advanced feature – no document collaboration, video displaying or other professional features found on off the shelf.

8/10

Lack of other uses-cases – can only be used for chat, hard to share editable documents
Unprofessional – used commonly for general conversation, but not built for virtual presentations and documents

8/10

Unable to delete messages – if any information sent is incorrect, you cannot delete it to avoid miscommunication
Privacy issues – school admin and Microsoft can see messages and shared files, though it is important for safety

9/10

Unprofessional – used commonly for general conversation
Not built for virtual presentations and documents, and small groups are less supported.

7/10

Figs. 1h
RACI chart

Communication Overview:

Communication is what allows the spread and flow of ideas between our team members – kind of like a glue, that strengthens our team. Having a good communication with each other is vital for project management, and making sure work is done when it needs to be.

Control and Monitoring:

In our project, Odoo is used as an effective tool for control and monitoring, with a strong emphasis on communication and organisation. Odoo provides a centralised platform where tasks, deadlines, and responsibilities are clearly assigned and tracked, ensuring all team members understand their roles. Through real-time progress updates, the team can monitor task completion and quickly identify any issues or delays. This allows corrective actions to be taken early, keeping the project on schedule.

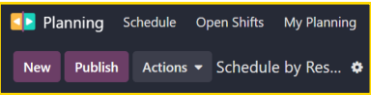

Fig. 2a

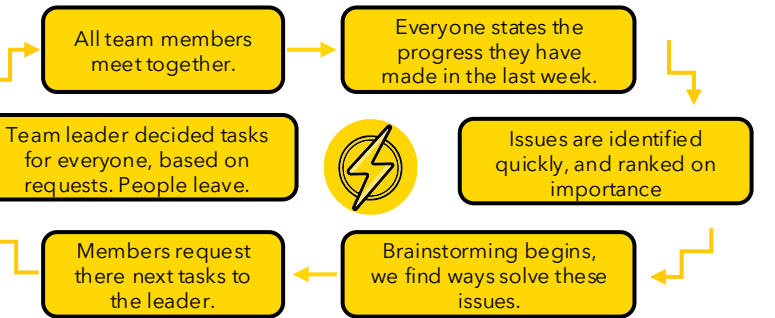

Odoo also supports collaboration for the following reasons:

- ➔ Storing design files, test data, and meeting notes in one shared system. This ensures consistency and prevents miscommunication between departments.
- ➔ The team leader can oversee overall progress, monitor performance, and ensure all work aligns with project objectives.
- ➔ Furthermore, it syncs in directly with our Gantt chart, improving its usability.

Overall, Odoo improves communication, accountability, and control, helping our team operate in a professional and efficient manner.

Weekly Internal status reports:

To Communicate with our team, we have decided to create a system where once a week, **all team members** (who can attend) meet physically meet for **15 - 45** minutes to discuss what they have done & what they want to do in the future – known as a **‘lightning summit’**. At bolt, we believe that this can greatly improve collaboration. At the end of each summit, Our team leader finalises and assigns tasks for every individual, **what issues need to be solved**; if a team member finds confusion afterwards, **they can message others with our app, or via teams (which we use in school)**. This way, we make sure that each week, the things that need to be done, get done, and if they haven’t, for whatever reason, they get prioritised:

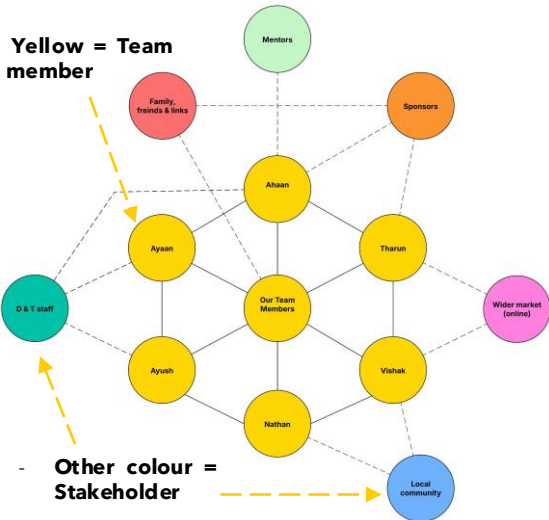

Shared Documents:

Having such shared documents is crucial for 2 reasons

- ➔ The transfer of ideas: We can collaborate on a single document
- ➔ The preservation of data, preventing leaks.

Type:	Use
Excel	Budgeting, handling money flow, Storing design ideas and their simulation results
PowerPoint	To store key documents which define team characteristics, such as a brand identity document.
Odoo	Storing timeline data and project scope Holding emergency team resources

Stakeholder Communication:

- Sponsors.
- D&T Staff.
- Local community.
- Families, Friends & links.
- Wider Market (social media)

Full lines = Communications between team members.

Dashed lines = Communications between team & stakeholder.

Status Reports:

Status reports are essential for keeping stakeholders informed about the progress of the project. They provide clear updates on completed tasks, current activities, and upcoming milestones, ensuring transparency and trust. Regular status reports allow stakeholders to understand project performance and identify potential risks early. This enables timely feedback and informed decision-making, helping the team remain aligned with expectations. Effective status reporting demonstrates professionalism, accountability, and strong communication, which are critical to maintaining stakeholder confidence and securing ongoing support throughout the project. Furthermore, it allows us to collect feedback on our project, due to the industry experience of our sponsors, as well communication return on investment criteria and marketing responses. It prevents to need to constantly, physically inform sponsors in this advanced digital age.

Documentation:

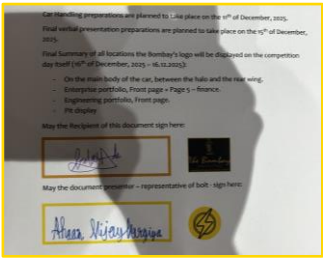

Fig. 2b

These documents allow us to create a set plan – not only to settle any debates that could ever happen between our team and the sponsor, but also to put everything in writing, organised in physical files. They also accompany this with a **short amount of feedback on how to improve** in any aspects of our project.

Disadvantages:

Status reports we found, became repetitive, and often annoying to the stakeholder. We experimenting training our chatbot to be used by stakeholders, allowing them to enquire about our team at their own time,

Error handling:

Sometimes, Things don’t go to plan – Therefore, It is important to find ways to try to find ways to overcome such difficulties:

1. Issue/disagreement identified
2. Discussed with neutral observer/ team roles it entails
3. Solution agreed, discussed with more experienced stakeholders
4. Solution implemented, losses accounted for.

Why market?

- ➔ Promotes sponsors: Using communication helps us to advertise to our sponsors in order to satisfy our end of the agreement – based on the value of their giving to ensure a return on investment.
- ➔ Encourages other students to engage in STEM activities, by sharing our stories and successes, as well as building awareness for the competition.
- ➔ To promote Bolt in order to catch the awareness of new companies who are interested in sponsoring to gain STEM recognition
- ➔ To expose our team member talents and team Ethos, including sustainability and innovation.

Marketing Philosophy:

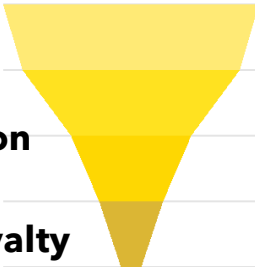

Marketing is a huge part of the team because it connects our project to the outside world, allowing us to communicate with experts and businesses. By gaining local publicity, we can gain access to professional opinions, collaborate with other students and raise awareness in sponsorship opportunities.

This is the funnel effect, a philosophy used by majority of companies to attract new users, as our industry collaboration revealed. The targeted group is ‘funneled’ through a series of marketing campaigns, gaining more brand awareness and following the further they go

Awareness

Consideration

Loyalty

Awareness:

This is the first stage of our funnel, where the target audience is introduced to our brand and gains interest in our project. The goal is to spark curiosity and engagement through clear, concise branding. This can be achieved by gaining publicity in related areas and using that exposure to promote Bolt. Our blog is an example – it attracts students and design enthusiasts within our target audience and directs them to the next stage via QR codes or links. Direct advertising is also an options, including billboards and media ads, but experimentation proves that subtle marketing is more effective, this just reinforces the word.

Consideration:

In this stage, the audience begins exploring our brand and identity, potentially considering collaboration. Instead of brief introductions, we aim to answer the reader’s initial questions by offering more detail about the competition and our project. At this point, the audience is curious but not fully engaged – they are exploring our content rather than following our journey closely. The goal is to impress and immerse them in our brand, providing a memorable experience. Examples include in-person displays showcasing our AR, VR, and ML capabilities, such as our pit display, which encourages deeper engagement and brand research.

Loyalty:

Loyalty is the easiest stage to manage, since the audience is very familiar with the competition and our team, and is following us. Only information we need to deliver to them are updates. As well as posting updates on social media, we have all followers access to our status report page (see previous page) so that they had the flexibility to track our progress, as well as test our products. To goal is to maintain the audiences initial impression m, supporting it with real world examples of our brand identity in play.

Merchandise:

Fig. 3a

By wearing custom clothing on the competition day, we create awareness in the teams around us of our presence. At our pit display, we gave out custom pens to remind students of our brand after the competition, and gave branded sweets to ensure this recognition.

Car Livery:

In theory, the car livery would not be a successful form of awareness marketing, because it doesn't direct the audience to further information. However, it provides sponsor return on investment, and builds out presence within the community of competitors, aiding to elevate our brand.

Fig. 3b

Sub-Projects

Market research told us that impressive content was very likely to be noticed by businesses and design enthusiasts. Thus, we created a sub-brand to showcase all the innovative things we have been working on, called Bolt Labs:

Bolt Labs:

Bolt Labs was created with the intent of going above and beyond the teams around us – as well as improving our project success through efficient design and improved geometry.

Bolt Sustainability:

Sustainability ensures trust- roughly 80% of the public are more likely to trust a brand supporting the environment and the community. See Community Projects section for more detail.

Website:

Our website is the centre of marketing: it's where the audience is directed from direct advertisement, and leads them to social media. This means that the website is in the consideration phase of marketing, where the audience has already been introduced to our brand.

As for strategy, the website should educate the audience on the competition and reveal our goals and projects in an exciting, impressive and interactive way to maintain engagement. The website provides a key portal through which our sponsors can be advertised, as the audience viewing it should be within our targeted groups if the awareness level was staged correctly. In order to maintain engagement and loyalty, we considered including a login feature, with access to exclusive content. However, we replaced this with an email marketing system. We use SEO (search engine optimisation) to appear near the top of page ranks on relevant searches. The website also directs the audience towards our social media, making it a connection between marketing strategies.

Link to website: www.bolt-f1inschools.co.uk.

Blog:

Our blog is a form of subtle marketing, because we are providing the audience with a product they want. This means that, rather than us having to guide the public, they come to us when searching for information conveyed in our blog. This introduces the viewer to our brand, under an even better light, as we provided a useful service.

A blog also contains our own project details, containing things like recent achievements and project submissions

Social Media:

Social media is incredibly effective for marketing because it covers all regions of the funnel: it can be used to spread awareness, but the audience has the option to explore our content further and eventually follow (loyalty). In addition, majority of social media targets content by default, allowing our message to be sent to students, business accounts and design enthusiasts, who are all likely to be active on social media.

Strategy:

Awareness:

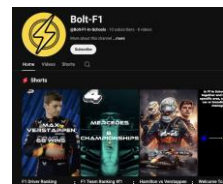

In terms of raising brand awareness, we decided through market research that there was no point posting content that requires previous knowledge of the competition, as this would not capture a user's interest. We chose to passively expose ourselves by publishing based on popular culture, or perhaps being informative and revealing bolt through these. This would drive views as the content was entertaining and relatable or being informative for a common cause.

Consideration - Loyalty:

Once being exposed, our goal (as mentioned previously) is to impress the audience or peak their interest. The targeted group will be brought to social media typically after viewing our initial content, through our flyers or our website and are intrigued about the competition. Firstly, we must clearly explain the nature of the competition to avoid confusion. However, to set us above their expectations and therefore gain their recognition, we included details of innovative projects we were working on with real-world applications, which the audience could relate to more easily. Relatability is essential in this phase, particularly on social media with a plethora of distractions. It is our primary method of loyalty

Platform	Audience	Content	Success?
Youtube (@Bolt-F1-In-Schools)	Students and young people	Short, relatable and viral content	Large scale brand awareness
Instagram	- Students and young people - General public – including design enthusiasts	- Relatable - Informative - Impressive	2 potential sponsor followed through.
Facebook	- General public - Potential Sponsors	- Community Help - Digital Media	Local brand awareness, great deals on products.
Reddit/Quora	- Students/ other competitors - Design enthusiasts	- Pit Display - Uniform	Aid received from many different people.

Fig. 3c

YouTube turned out to be our most popular channel

Through social media, we were able to determine 2 things:

- The success of other marketing methods, as many videos about the team itself were popular, the content we drove users to for the consideration phase
- In the awareness phase, general, viral content, as predicted, is more enjoyable.

Target Audiences:

Group	Purpose	How?
Students	- Promote the competition and STEM by sharing our story - Help Future teams, cement our STEM racing legacy.	- Website - Weekly news - Blog - Pit Display
Small Businesses	- Appeal to get a Sponsorship - Create relationships with professionals	- Flyers - Handling out Business cards - Digital Media - Community Help
Public	- Inspire involvement in student competitions - Create relationships with professionals - Provide return for sponsors	- Community Help - Digital Media
Judges	- To convey the Bolt brand in the best way possible - Advertise the best aspects of our team, shaping our image	- Pit Display - Uniform

Bolt City - VR

Our VR City allows users to play with technology we experimented with. This specific world is a simple parkour that leads the user to our CAD model version of the final prototype we use in the competition. Each building is dedicated for one company, emphasizing our gratefulness to receive a sponsorship from them.

Direct Advertising

Gumtree: Gumtree is a popular website that allows users to explore options from all over the internet when browsing for new content or things to buy. We partnered with them to launch ads on their site. This was to appeal to design enthusiast, as our ads were targeted at those looking for spare motor parts

Flyers: partly for our own marketing, and partly for return on investment for stakeholders, we posted 50 flyers around Orpington to raise brand awareness

Community Projects

Library aid:

West Wickham library , our local library, reopened recently after almost a year of renovation, with new areas watch as a business room, lounge, computer area and 3D printing block. We donated some branded spools of rainbow filament to this department, which regularly hosted an adult 3D print session. This allowed us to connect with design enthusiasts who used the facilities and viewed our branded 3D printed material.

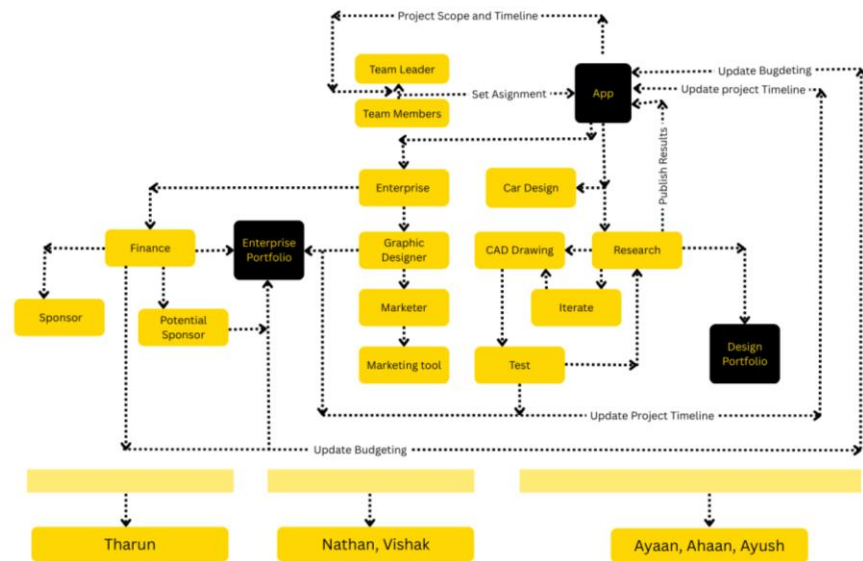

Sustainability:

Market research told us that audiences are 90% more likely to trust an organisation if they support environmental causes. We partnered with a charity 'just one tree' to achieve our sustainability goals. For every pound we gave, they planted a tree with our logo and website domain on a plaque on the trees.

Evaluation:

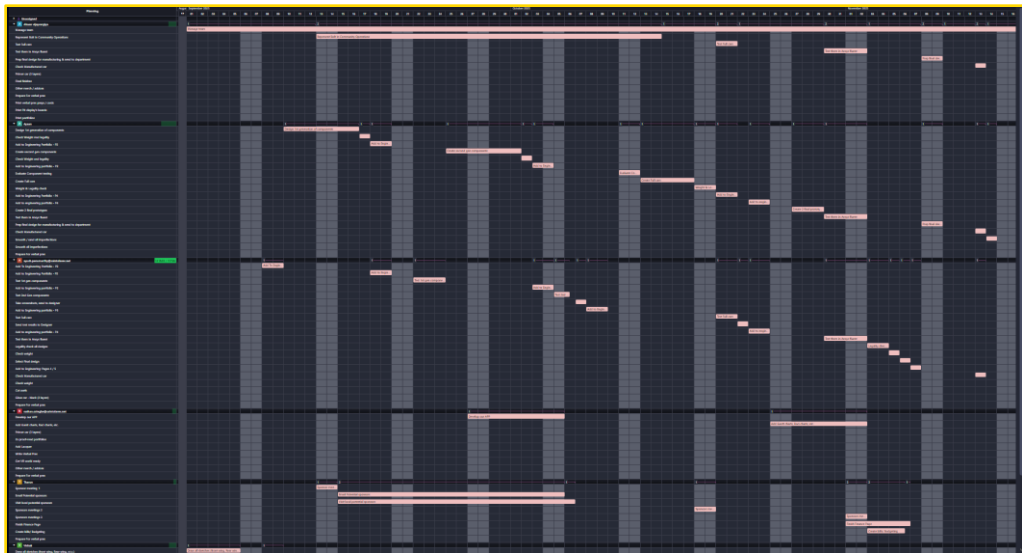

Type:	Percentage Support gained	Success?	Method return?
Social media	50%	Y	2%
Webpages	30%	Y	5%
Merch	5%	N	5%
Sub-brands	10%	Y	20%
Direct advertising	3%	N	15%
Community	2%	Y	20%

General Function:

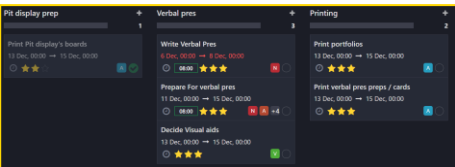

This is the structure of our team. Baked into our app, it not only helps us sort tasks, but **allows us to present our team structure to stakeholders in a very simple way, of which anyone can understand.** Tasks can be also organised via this, as in our app, we can input the task, its details and which category it should be in. It can automatically tell us who should do the task and what, if it is not already apparent / there is a dispute. This is also the base of our RACI matrix, which is displayed on slide one. It also displays where things should be displayed, like the enterprise portfolio or design portfolio.

Project Scoping - Gantt & Kanban charts:

To scope our project, we use a gantt chart, which displays all of the tasks we have had over the past 3 and a half months (since Sept. 1). This is made using Odoo, one of our sponsors (more detail on P5). It contains when each person does the task, What the task is, it's priority level, who will be doing things the same time as them (as on the bottom row, the total amount of people doing tasks at one time). Within each task, we will have a **detailed description** of everything we have done.

Using this, we also make sure that tasks are distributed equally, and make sure that no person has too many tasks to do at 1 given time, improving efficiency.

These tasks can not only be organised via a Gantt view, but also a list of projects, with the dates & priority levels, sorted by category. This type of organisation method is called a Kanban view, and it benefits the observer, as tasks are slightly easier to view, and it is easy to see how urgent the task is with the 3-star priority bar.

When something is done, the task is greyed out. When it is overdue, the text becomes red, and when something has white text, the task is on target

Time allocation:

This Diagram explains the total time taken (in Hours for different aspects of competition preparations:

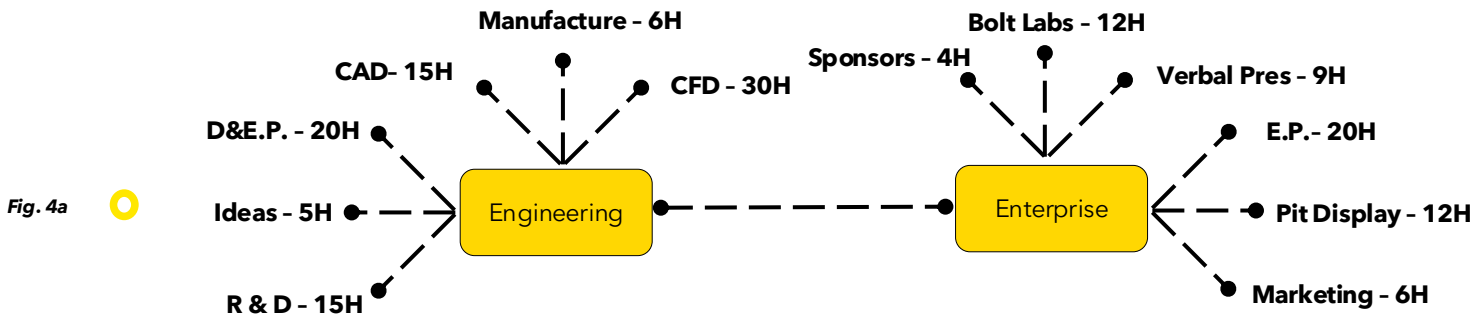

Fig. 4a

Work-breakdown:

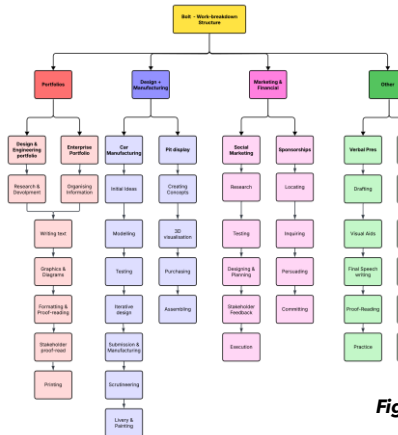

Fig. 4c-e

Scope Challenges:

No matter how good a teams' plan can be, a change in scope is almost inevitable. This table conveys our changes in scope (assuming from all members combined, 10 hours of work are ideally put in each week):

The change?	The impact?	How to solve / use?
Sick Days	- 10 hours (Combined)	Split undone work between well members.
Extra Sessions	+ 7 hours	Get work done before the deadline.
School work	- 15 hours (Combined)	Allow Buffers In time planning.
Term Breaks	+ 12 hours	Add extra meetings, taking breaks.

Risk Assessment:

Impact

	1	2	3	4	5
1					(B)
2				(D)	
3		(E)		(G)	(A)
4				(C)	
5	(F)				

Likelihood

Fig. 4b

Strategy:

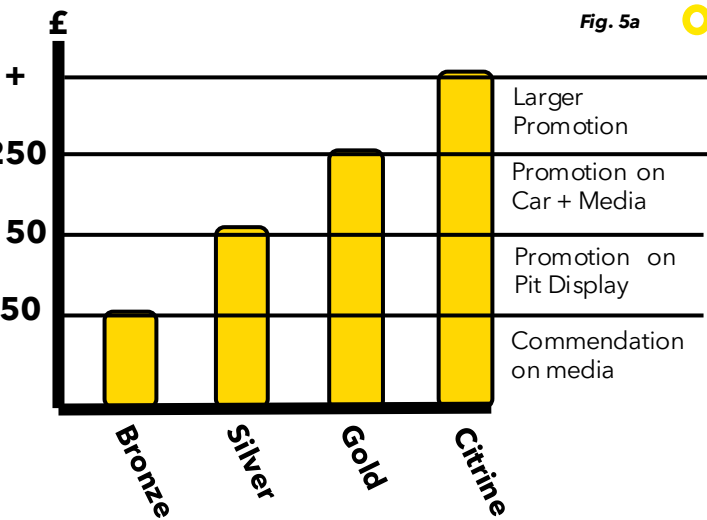

To Identify risks and brainstorm possible fixes, we have used the Created a risk-assessment matrix (RAM). This identifies Impact of a bad outcome on the x axis, and likelihood on the Y axis. Then, below, we have Clarified what letter applies to what risk, A possible prevention of a bad outcome so it doesn't happen in the first place, a possible solution if it does happen, the worst possible case that could happen, and an overall score - the more, the worse (Likelihood x Impact).

	Risk	Prevention	Solution	Worst Case	Score
A	Forget Competition Media	Pack Proactively in the days before.	Turn around and collect them.	Lose a significant proportion of the marks	15
B	Loss of Files	Store Back-ups	Recovery Efforts, Restart	File cannot be used for competition	5
C	Late to Competition	Leave Early, account for traffic	Set Up quickly	Unable to compete	16
D	Member Quits	Keep a friendly environment	Recruit	Compete with less member	8
E	Deadline Missed	Include schedule tolerance	Change Scope	Missing Aspects	6
F	Member Unavailable	Check availability early	Continue without them	Less collaboration	5
G	Money Shortage	Accurately budget, hold emergency money	Cut funding to optional sources	Unable to compete	12

Sponsorship Tiering:

To organise the sponsors, we have made a table containing 4 tiers of sponsorship, categorised by the amount of fiscal value the sponsor is providing to us:

Silver Tier Sponsor - Don Bosco:

Don Bosco is a maths tutor who focuses mainly in GCSE and A-level Maths to help students achieve top grades. He has kindly donated £50 pounds which places him in the Silver Tier of our sponsorship program

Gold tier Sponsor- YoungThinks:

YoungThinks is a mathematical tutoring company which focuses primarily on UKMT competitions like Maths challenges and Olympiads, Or Non-GCSE exam board preparations (Like the IGCSE). This company have kindly given us £200 pounds, which places them in the Gold tier of our sponsorship programme.

Citrine Tier Sponsor - The Bombay:

The Bombay is an award-winning restaurant in Orpington, Kent which is known for its authentic cuisine, unique interior and lively atmosphere. They have generously contributed £250 pounds, which places them in the Citrine Tier of our sponsorship programme.

Citrine Tier Sponsor - Ansys:

Ansys is a software company that gives students free research software, e-resources and support which helps them excel in competitions like F1 in schools. Using Ansys, different teams gain real world engineering experience and a competitive advantage

Citrine Tier Sponsor - Odoo:

Odoo is a management software that helps teams to organise the work that they have been doing. It has multiple tools such as calendar and appointments, to do lists, accounting, project management tools including Gantt charts, time sheets, employees and website. We have gotten this sponsorship via an older team - whole school sponsor.

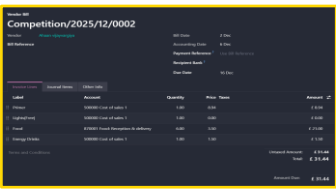

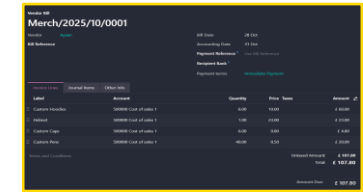

Return On Investment

Using our sponsorship, it helped local businesses to gain recognition and visibility within the community, the public and F1 in Schools events, helping us build a positive and supportive relationship with the real world. We sought to go above and beyond other teams to convey our brand and our Sponsor's brand, as you saw on the previous pages. Including what most teams do by displaying their sponsors visually via their **car** and **merchandise**, **pit displays** and **portfolios**, we have a few of our own, innovative, strategies:

- **The Bolt Flier** - We have taken all of our sponsors and put them on a flier which we handed out to members of our school and community advertising all of our sponsors and what they do.
- **Blog Posts** - In our blog posts, We make sure to include **All** of our sponsors, advertising their business (products & services). The websites of them & their own social media will also be linked onto it.
- **VR** - Our VR is the centre of our pit display - where many fellow competitors & teachers look, it shows our innovation & creativity in the forefront. We also keep our sponsor's logos in it, allowing their brand to be advertised in it, and that too in a very creative way.

Budgeting Strategy (Accounting):

To Make sure we spend the right amount of money, We make sure to budget everything using our project management software (which we have been kindly sponsored by), Odoo. Using the 'accounting' tool on this software, we track all of our expenditures, and the people who spend money (so we can pay them back). For example, In the images below us, we have accounted.

Managing Financial Risks:

To manage fiscal risks, we have to identify the areas where overspending can affect our performance in the competition. We need to make sure that we have money to spend it in more important areas. To prevent any financial issues, we decided to organise our spending into 3 tiers which are **Critical, Significant and Minor Expenditures**, Categorised by the amount of marks they cost.

Critical- Items that are essential for the competition, like **Primer**.

Significant- Items that contribute to our branding such as **Hoodies and Merch**.

Minor- Extra accessories and stuff for display such as **Pens and Sweets**.

Approach:

In order to be profitable from these sponsors, we made sure to contact them in all ways possible. A few methods that we did are described below:

Email and Contact- We first approached these sponsors by emailing them and asking them about any sorts of possible funding. By emailing different companies, it enabled them to have more than one option of contact to see whether they were interested in sponsoring Bolt.

In Person Discussion- We also visited local businesses, companies and shops. We spoke to them directly about our project and what F1 in schools in and what it involves. Talking face-to-face allows us to explain our goals more clearly and to answer any different businesses to support our team. questions. This helps us to build a better relationship with potential sponsors.

The Prospectus- Our Prospectus was a document that consists of all key information and a short explanation on what F1 in Schools was for a better understanding. Our prospectus outlines a description of our team, benefits for the sponsor and provided details so they could contact our team if needed.

Regular Communication- To ensure good public relations in the future with our sponsors, we ensure that we regularly ask for feedback and report to them in general. More detail is on page 2.

* Received for free - Free credits

** Ethos under manufacturing due to highest carbon emissions.

Evaluation - We learnt that emailing companies is quick and there is a wider market, meaning you can email more people in one go. However, they aren't obligated to respond and therefore often ignore sponsorship requests. In contrast, In-person meetings takes a longer time, but it allows better communication and helps build better relationships with the sponsor. This ultimately increases the chance of securing a further conversation, and therefore sponsorship.
